

ASK YOUR HEALTH CARE PROVIDER FOR THE SUPERIOR PROTECTION OF FLUZONE® HIGH-DOSE QUADRIVALENT (INFLUENZA VACCINE) FOR ADULTS 65+ COMPARED WITH A STANDARD-DOSE FLU VACCINE*

*In a clinical study conducted in 2011-2012 and 2012-2013 in approximately 32,000 adults 65+, the trivalent formulation proved to be 24% more effective at preventing the flu than standard-dose Fluzone® (Influenza Vaccine).

WHAT IS FLUZONE® HIGH-DOSE QUADRIVALENT (INFLUENZA VACCINE)?

FLUZONE® HIGH-DOSE QUADRIVALENT is a vaccine that helps protect against influenza illness (flu).

FLUZONE® HIGH-DOSE QUADRIVALENT vaccine is for people 65 years of age and older.

SELECT IMPORTANT SAFETY INFORMATION

FLUZONE® HIGH-DOSE QUADRIVALENT should not be given to anyone who has had a severe allergic reaction to any component of the vaccine, including eggs or egg products, or after previous dose of any influenza vaccine.

Please see full Important Safety Information on the back cover.

Please see accompanying full Prescribing Information and Patient Information in the pocket.

 Influenza Vaccine
**Fluzone® High-Dose
Quadrivalent**

sanofi

THE INFLUENZA RISK FOR ADULTS 65+

Your immune system ages right along with you, making it harder to fight off infections like the flu. In fact, if older adults get the flu, they may even be at greater risk of flu-related complications compared with younger people.

THE CDC ESTIMATES THAT EACH YEAR, APPROXIMATELY:

UP TO **85%** OF FLU-RELATED DEATHS AND **50% – 70%**

OF FLU-RELATED HOSPITALIZATIONS

in the United States occur in people 65 years of age and older.

 Influenza Vaccine

THAT'S WHY WE MADE FLUZONE® HIGH-DOSE QUADRIVALENT SPECIFICALLY FORMULATED FOR PEOPLE 65+

4x

Formulated to be 4x the standard dose.

24%

FLUZONE® HIGH-DOSE QUADRIVALENT offers superior flu protection for adults 65+.

In a clinical study conducted in 2011-2012 and 2012-2013 in approximately 32,000 adults 65+, the trivalent formulation proved to be 24% more effective at preventing the flu than standard-dose Fluzone® (Influenza Vaccine).

Compared to Fluzone®, the most common side effects were slightly more frequent and included pain and redness at the injection site, muscle ache, tiredness, and headache.

The immune response and side effects of FLUZONE® HIGH-DOSE QUADRIVALENT were similar to the trivalent formulation in a 2017-2018 clinical study in 2,670 adults 65+. FLUZONE® HIGH-DOSE QUADRIVALENT is expected to provide better protection against the flu compared with standard-dose quadrivalent flu vaccines.

FLUZONE® HIGH-DOSE QUADRIVALENT is covered under Medicare Part B, and by most Medicare Advantage plans, with no co-pay.*
